Ebuka Francis Mbanusi

Software Engineer (Backend-Focused | Laravel & APIs)

Professional Summary

I am a results-driven Software Engineer with over three years of hands-on experience designing, building, and maintaining scalable web and mobile application backends. My core strength lies in Laravel-based systems, API development, payment integrations, and automation-heavy platforms. I have worked both independently and as part of cross-functional teams, collaborating closely with frontend developers, designers, and product stakeholders to deliver production-ready solutions across fintech, e-commerce, SaaS, AI automation, and trading systems.

I am highly detail-oriented, performance-conscious, and focused on building secure systems that scale in real-world environments. I take ownership of backend architecture, enjoy solving complex problems, and consistently aim to deliver APIs that respond quickly, remain stable under load, and are easy to maintain.

Technical Skills

Programming Languages

- PHP (Advanced)
- JavaScript (Intermediate)
- Python (Beginner–Intermediate)
- SQL (MySQL, PostgreSQL)

Frameworks & Technologies

- Laravel (core framework; APIs, queues, jobs, authentication, wallets)
- RESTful API design & versioning
- jQuery, AJAX, Bootstrap
- MySQL & PostgreSQL database design and optimization
- Flutter & React Native (API integration)
- Machine Learning fundamentals (Python, scikit-learn)

Tools & Platforms

- Git & GitHub
- Linux / Bash scripting
- Docker (beginner–intermediate)
- Payment Gateways: Flutterwave, Paystack, crypto payment APIs
- Queue systems, background jobs & cron scheduling
- Firebase Cloud Messaging (FCM)

- Third-party API integrations

Professional Experience & Project Highlights

SolexTrade – Digital Trading Platform

Role: Backend Developer

- Built and maintained a secure Laravel backend for a digital gift card and bill payment platform.
- Designed wallet systems for users, transaction tracking, and balance reconciliation.
- Integrated multiple payment gateways for deposits and withdrawals.
- Developed admin dashboards for approvals, rates management, and transaction monitoring.
- Implemented authentication, role-based access control, and security checks.

AdClickGo – Advertisement & Monetization Platform

Role: Backend Developer

- Developed subscription-based features and automated ad-serving logic.
- Built analytics endpoints and reporting systems.
- Implemented user management, billing logic, and performance tracking.
- Focused on scalability and clean API architecture.

ResalePlaza – Multi-Vendor E-commerce Platform

Role: Backend Developer

- Designed a multi-vendor architecture with vendor wallets and order separation.
- Implemented order management, payouts, and dispute-handling workflows.
- Built secure checkout flows and vendor settlement logic.
- Ensured data integrity across users, vendors, products, and orders.

HostAm – Web Hosting Platform

Role: Full Backend Developer

- Built a Laravel-based hosting platform allowing users to create projects and manage files.
- Developed a custom file manager with upload progress tracking and user-specific directories.
- Implemented authentication, email verification, and password reset flows.
- Focused on system stability and performance.

Task & Employee Management Systems

Role: Backend Developer

- Built systems for companies to assign tasks, manage departments, and track employee progress.
- Implemented notifications, task status updates, and reporting features.
- Designed role-based access for admins and staff.

AI-Powered Trading & Automation Systems

Role: Backend / Automation Developer

- Developed Forex trading bots using Python and MetaTrader 5.
- Integrated technical indicators, sentiment analysis, and machine learning models.
- Built automated trade execution, risk management, and Telegram notification systems.
- Focused on real-time decision-making and adaptive trade logic.

API Backends for Mobile Applications

Role: Backend API Developer

- Built Laravel APIs consumed by Flutter and React Native applications.
- Implemented authentication, wallet systems, notifications, and role-based endpoints.
- Ensured clean API responses, pagination, and proper error handling.

Education

Bachelor’s Degree (In Progress)
Computer Science

Certifications

- Laravel Certification – TestDome
- Web Development Certifications – SoloLearn
- Physical Learning Center Certificate (Web Development)

Soft Skills

- Strong problem-solving and analytical thinking
- Clear communication and teamwork

- Ownership mindset and leadership ability
- Attention to detail
- Ability to learn new technologies quickly

Interests

- Chess
- Gaming
- Football

Availability

Open to full-time, contract, and remote opportunities.
