Professional Summary

Results-driven Backend & DevOps Engineer with strong expertise in Laravel, RESTful APIs, CI/CD, and AWS. Experienced in designing and deploying scalable backend systems for fintech, e-commerce, and SaaS platforms. Skilled in building secure payment systems, real-time communication features, and cloud-based deployments. Passionate about automation, system performance, and applying AI/ML solutions to solve complex problems.

Core Technical Skills

• Backend & APIs: Laravel, PHP, RESTful APIs, WebSockets, JSON, Authentication

• DevOps & Cloud: AWS (EC2, S3, RDS), Linux, GitHub Actions, CI/CD, Bash scripting

• Databases: MySQL, PostgreSQL

• Programming: PHP, JavaScript, jQuery, AJAX, Python (AI/ML), HTML, CSS, Bootstrap

• Mobile & Integration: Flutter (API integration, wallet systems), Payment gateways (PayPal, Paystack)

• Version Control: Git, GitHub

• Other Tools: Secure Auth, Webhooks, Deployment automation

Professional Experience

Freelance Backend Developer (April 2020 – Present)

• Designed and developed backend systems for e-commerce, fintech, and SaaS applications handling tens of thousands of requests per month.

• Built secure payment integration (PayPal, Paystack, custom gateways) for financial and e-commerce platforms.

• Deployed APIs and services on AWS with automated pipelines via GitHub Actions & SSH.

• Optimized API response times and improved system performance by 30%+.

• Led development of real-time chat systems with Laravel WebSockets.

• Collaborated with cross-functional teams (mobile, frontend, design) to deliver scalable products.

Key Achievements:

• Automated deployment pipelines, reducing manual work and errors.

• Designed a high-traffic web platform handling 40,000+ page views monthly.

• Delivered robust multi-vendor e-commerce APIs and fintech backends.

Highlighted Projects

• Adclickgo Mobile App (Flutter + Laravel API): Built wallet & checkout system with Laravel backend and Flutter frontend integration.

• WhatsApp Clone (Laravel WebSockets): Engineered a real-time chat system with modal UI (desktop & mobile), message caching, and API-driven chat storage.

• AI Forex Trading Bot (Python + MetaTrader5): Developed automated trading system with multi-strategy signals, adaptive SL/TP, Telegram alerts, and ML training.

• Personal Finance Tracker (Laravel API): Implemented CRUD for income, subscriptions, and expenses with wallet balance tracking and monthly reporting.

• CMS API with Laravel Sanctum: Designed a flexible CMS API where each page supports structured JSON, file uploads, and secure API authentication.

• Company Task Manager (Laravel + AJAX + Bootstrap): Built platform for companies to register, add employees, assign tasks, track progress, and export reports.

• AI Assistant (Jarvis): Created local AI assistant powered by transformer models + Gemini fallback with voice commands and persistent memory.

• E-commerce Platform API: Built scalable APIs powering a multi-vendor marketplace with product management and secure checkout.

• Fintech Platform Backend: Implemented secure payment gateways, automated transaction processing, and wallet systems.

• Food Delivery App API: Developed backend supporting order assignment, driver wallet system, and live order tracking.

Education

• Bachelor of Science, Computer Science – In Progress | Miva Open University

• Bachelor of Science, Software Engineering – May 2024 | ALX SE (Remote)

Certifications

• Laravel Certificate – TestDome

• Web Development Basics – Sololearn

• Software Development Certificate – Physical Learning Center

Soft Skills

• Problem solving & analytical thinking

• Team collaboration & leadership

• Attention to detail
